COMMUNITY MULTISPORTS BOOKING FRAMEWORK

A practical registration and slot-booking system for a year-long sports series

PICKLEBALL

PADDLE BALL

BOX CRICKET

Planning concept • October 2026 – October 2027

One registration. Many events.

Keep the player database permanent, while participation and bookings are managed separately for each event.

ONE-TIME REGISTRATION

Player creates a profile once, receives a unique ID, and can return for future events.

EVENT-WISE CONFIRMATION

Players confirm attendance closer to each event instead of committing months in advance.

SLOT BOOKING

Confirmed players choose available 30-minute slots within the event's booking rules.

Core principle: Registration is permanent; attendance and slot bookings are event-specific.

- Run one event approximately every 15 days for the next year.
- Support pickleball, paddle ball and box cricket.
- Give organisers a clear view of demand, capacity, bookings and final schedules.

How a player uses the portal

Example: the first event takes place on 29 October 2026.

1

Register

Enter name, contact details, gender/age if needed, and preferences.

2

Get account

Receive a unique player ID (e.g. MP123 / FP123) and set a secure password.

3

Confirm event

Log in before the booking deadline and confirm attendance.

4

Choose slots

Select sport and up to two eligible 30-minute slots.

5

Get confirmation

Receive booking details; organiser uses confirmed data to build the schedule.

Security note: avoid fixed/default passwords. Use a password setup or reset link, and store passwords securely.

Don't ask for an April commitment in October

Collect the community now; ask for a reliable attendance commitment closer to each event.

NOW

Register players

Build the database

7 DAYS BEFORE

Open booking

Share event details

48 HOURS BEFORE

Close booking

Lock attendance

BEFORE EVENT

Publish schedule

Send reminders

Example: 29 October 2026

Suggested booking deadline: 27 October 2026, subject to the final event policy.

Example: April 2027

Invite players to confirm in the week before that event—not six months earlier.

10 courts × 3 hours = 60 court-slots

Assuming 30-minute slots and all 10 courts are available from 7 PM to 10 PM.

10
courts

6
slots per court

60
court-slot units

180 min
per court

If one player occupies a slot

60 player appearances across the full 3-hour window.

If four players share a court

Up to 240 player appearances—if the format allows four players per slot.

Important: 240 is not the number of separate time slots. It is a potential player-place count under a four-player shared-court model.

Define the rules before building

These are proposed defaults. Confirm the sport formats and event policy before development.

Maximum two slots

Per player, per event; clarify whether the limit applies across all sports combined.

Shared game vs full court

Decide whether a player books one place or reserves an entire court for a group.

Live capacity

Show remaining places and update them immediately after a successful booking.

Conflict prevention

Prevent double-booking of the same capacity and enforce the two-slot limit.

Cancellation & waitlist

Release cancelled places; allow a waitlist when a slot becomes full.

Attendance policy

Track check-ins and communicate a fair no-show policy.

One portal, sport-specific capacity

The system should manage court capacity and player places—not just a generic list of slots.

PICKLEBALL

For doubles, one court slot commonly accommodates four players. Decide whether players join shared games or book the court as a group.

PADDLE BALL

Confirm the intended format and number of players per court before setting capacity.

BOX CRICKET

Consider team-based registration or organiser-assigned teams instead of treating each booking as an individual court reservation.

Recommended data model: Event → Sport → Court/playing area → Time slot → Capacity → Player bookings → Match schedule.

- Admin can add courts, dates, start/end times and capacities.
- Players only see slots available for the selected sport and event.
- Organisers review confirmed bookings and then assign matches/courts.

The organiser needs a live control panel

A useful dashboard turns registrations into an operational plan.

PLAYER DATABASE

Total registrations, unique IDs, contact details, preferred sports and account status.

EVENT BOOKINGS

Confirmed, pending, cancelled and waitlisted players for each event.

CAPACITY MONITOR

Booked places, remaining places and full slots by sport, court and time.

SCHEDULE EXPORT

Download player lists and booking data in spreadsheet format for match planning.

MESSAGES & REMINDERS

Send event announcements, booking confirmations, deadline reminders and schedule updates.

Build in two phases

Start with reliable registration; add booking only after capacity rules are finalised.

PHASE 1 — REGISTRATION

• Online registration form • Unique player ID and secure login • Player profile and sport preferences • Admin database and exports

PHASE 2 — BOOKING ENGINE

• Event creation and booking windows • Slot capacity and live availability • Two-slot enforcement and cancellation • Waitlist, confirmations and schedule export

Go-live checklist

- Confirm capacity per sport and whether bookings are individual or group-based.
- Decide the maximum-slot rule across sports.
- Test simultaneous bookings, cancellations and full slots.
- Pilot the portal with the first event before scaling to the full year.

Two decisions unlock the design

Before development, confirm the following:

1. What does a slot reserve?

A single player's place in a shared game, the entire court for a group, or interest for organiser-assigned matches?

2. How is the two-slot limit applied?

Two slots total across all three sports per event, or two slots per sport per event?

Recommended direction: permanent player accounts + event-wise confirmation + sport-specific capacity + live booking controls.
